The path ahead is clear. With global warming on the rise, the world is looking for greener and cleaner alternatives to conventional power generation. Bio energy is the key to a happy future for our planet and for ourselves.

## About Us

The path ahead is clear. With global warming on the rise, the world is looking for greener and cleaner alternatives to conventional power generation. Bio energy is the key to a happy future for our planet and for ourselves. Arrya Hi-Tech Energy (AHE) pioneered India's first new generation sustainable biomass gasification power plant at Palladam, India. This state-of-art Biomass Gasification Technology harnesses energy from biomass and has a wide range of applications. It can be used for thermal heat generation and effectively replace fossil fuels for heating applications in kilns, furnaces and so on. It can also generate power ideal for village electrification, captive power generation from 50 KW to 2 MW and grid linked power plants. It also works well in projects that combine heat and power. The advantages of choosing AHE is that this offer a continuous source of energy that is sustainable and cost-effective. What make this extremely attractive is the low capital cost and the eligibility for the central government's capital subsidy. Besides, gasification plants enjoy accelerated depreciation and independent power projects are exempt from IT for 9 years. Other advantages are the multi-locational capability, high plant load factor, cheap and plentiful feedstock and value-added by products that generate an income stream of their own. ROI is quick and there are substantial savings. Make the switch!
