Welcome to crystal sand the technical name of sand is “fine aggregate”. Fine aggregate, as defined by Indian standard is 383, is material below 4.75 mm and above 150 microns with appropriate gradation of particles.

About Us

Until recent years, river sand was used as fine aggregate in construction activities. It was thought to be available in abundance and there were very few restrictions on digging up river sand for construction. Today, due to the adverse impact it has on the ecology, there is a country wide ban on sand mining. This has given way to the understanding and usage of artificial sand products such as Crystal Sand.

Crystal Sand, a green product, is the perfect alternative to river sand. It gives you more strength with the same design mix. With its higher binding strength and fewer impurities, it produces denser and stronger concrete mix.
