## About Us

In order to achieve desired quality standards, our entire production comes from a composite woollen mill, comprising of Weaving and Finishing, which is a complete manufacturing process for woollen fabrics. This facility provided by us, ensures that we are able to execute orders in bulk, covering a complete range of quality woollen materials.

Presently, we have the capacity to produce 60,000 metres of woollen fabrics every month. All orders placed on us by our customers, some having even 'Export House' status, are executed as per the quality/specifications desired by them. We accept/undertake small quantity orders, as well.

Both of the wools (new wool and recycled wool) are used in the manufacturing process. In dyeing, we use Azo free dyes, thus ensuring our commitment to produce the materials which are eco friendly.
