Offering engineering services, project management services etc.

About Us

The Group has focused on environmental sustainability themes and in its architectural projects implements new energy saving strategies. **Intelligent façades**, custom made for the largest world projects: **façades filtering light**, **abating acoustic pollution** and **saving heat from the sun** for winter heating or summer ventilation. Buildings capable of generating power through **photovoltaic** cells and resisting the strongest **seismic events** or **explosions**. Research and development within the Permasteelisa Group has primarily focused on **sustainable design** of buildings and the development of façade components and systems to achieve this. Main focus areas of sustainable building design include:

- **Protection**

One of the main goals of any sustainable building is to provide not only protection against the elements but also safety and security to its occupants. With this in mind, **structural and safety research** is being undertaken in the areas of **blast enhancement** against the threat of explosive attack, **fire protection** and **seismic design**. Despite the severe structural demands that such loadings have on façades, the outcomes of this research have led to the development of systems and technologies that...
