About Us

At TSAC Plastics we have been working passionately in the plastic industry and we are inspired by the most advanced technologies and groundbreaking ideas to date. With a start in May 2011, we quickly increased our capacity from just 500,000 sets per month to over 6 million capacity today, now spread over two units. We maintained a very low rejection rate ($<.05\%$), while our plastic intake rose to 60 tones every month. Our units are equipped with new high-performance machines that ensure minimum breakdowns and uninterrupted supply to our clients. We specialize in the manufacturing of plastic parts for the CFL industry, but are enthusiastic about the custom moulding process since the beginning.
