About Us

The 20th century is marked by great scientific and technological developments to explore the hidden facts about the Space. Even high altitude Rocketry can make man's dream true by making successful landing of on moon's surface on 1969 by Apollo 11 mission. Thus it leads to the expansion of human ambition to get healthy settlement beyond the perimeter of earth.

Lunar Colonization is the expansion of humanity on moon's base. Healthy settlement at moon's base is the only objective of Lunar Colonization. As moon is the natural & nearest satellite to earth, thus efforts to make healthy self sufficient lunar settlement at moon's surface is higher and is also logically true. Lunar Colonization will leads to the upliftment of the human civilization by bringing cultural & economical prosperity.
