About Us

BioMedix was established in 1986, exclusively to introduce new ophthalmic technologies, into the medical community in India. Products ranging from simple optical and refraction devices to advanced laser systems were sourced from leading international ophthalmic instrument companies around the world. Our mission was to meaningfully assimilate the technologies relevant to the unique market situation in India, with adequate clinical and technical support. The early association with companies such as H.Ogino & Co. Ltd. of Yokohama, Japan, IRIS Medical and Interzeag AG still continue having stood the test of time. In 1995, BioMedix, in an effort at backward integration, commenced the manufacture of ultrasound products for ophthalmology - A-Scan Biometer and Pachymeter and again in 1997, introduced the Quantum CES, a comprehensive ophthalmic surgical unit for Phaco Emulsification. Today, the product range of BioMedix covers the management of Cataract, Cornea, Glaucoma and diseases of the vitreous and retina.
