Climate Control System

https://www.indiamart.com/climate-control-system/

With major technology advancements in water sterilization and water recycling we are able to help commercial greenhouse growers to achieve considerable savings on water and fertilizer costs and at same time meet environmental regulations.
About Us

Our technology is easy-to-use and easy-to-install. It comes with remote Ethernet/Internet access which makes it easy to check up on your crops when you are away from your greenhouse operation. Imagine keeping an eye on the internal greenhouse climate and crop feed all from your smartphone. We’ve made that possible with a mobile application interface available with our software. Our Climate Control Greenhouse Automation Systems work around the clock to optimize the greenhouse climate, increase crop yields, reduce energy costs as well as labor costs. Our systems protect the entire greenhouse against harsh weather conditions and immediately notify you with an alarm should something go awry, giving you the freedom to not have to monitor the greenhouse at all times yourself. Climate Control Systems Inc. offers 3 major product lines The Climate Manager™, Fertigation Manager™ and Ozone Pro Water Treatment Systems™, each coming with a Lifetime Warranty on all our digital and analogue modules that control these systems. We are also updating our software as technology evolves and can also upgrade your systems for more customization and greenhouse expansion to help you grow into the future.
