

# Disel & Auto Spares India

---

We are the wholesaler we deals in reconditioning services, cylinder liners, old ship equipments etc.

## About Us

with more than 35 years experience in import and indenting of spares and components for large bore marine and industrial diesel engines we have specialized in sourcing spares directly from original equipment manufacturers (oems) authorized by the engine builder and from specialized manufacturers. This works well to the advantage of the present day engine user who has to ensure the maximum output from the engine at the lowest possible cost without any compromise on the quality of the components being replaced. our association with customers using furnace oil operated power plants for base load applications in cement plants, textiles mills, alloy steel plants, steel rolling mills, paper mills, independent power producers etc. Has helped us to identify areas where substantial cost savings can be achieved by using spares from original equipment manufacturer. Following are the components that can be offered for most of the European and Japanese diesel engines having bore diameter of 150 mm onwards.
