## About Us

What good is technology if it does not simplify or better our lives? A good technology is that which identifies a need or a problem and provides a better solution. That explains the inception and evolution of Dani Data Systems (DDS). The company was incorporated in 2002 and is driven by passion for identifying and filling the gap between need and solution. DDS recognized the need for controlling access to places of work and living. DDS pioneered Access Control technology and began manufacturing access control for security, Auto ID and RFID products. DDS's knowledge of RFID and its methods of problem solving led to its research and development activities. Challenges that could possibly be overcome by the concept of RFID in everything, appropriate application of RFID/ NFC technology were identified and accepted there by gaining recognition as an innovative company. DDS is ready for innovating, applying technology to resolve problems. Make in India and strong after sells support makes DDS the most preferred partner. Vision To attain global leadership in its mandated technology domain of Auto ID and RFID/ NFC by continuous augmentation of its inherent strengths. Mission To innovate and apply technology in the development of products and solutions by confirming with best practices in identifying and meeting the expectation of evolving markets.
