About Us

ENVIRONMENT AND ECOLOGY, an interdisciplinary international science journal, the research editions of which are published in March, June, September and December .The journal was started in March 1982. ISSN 0970-0420

It is a forum for RD labs, industries, manufacturers, pollution abatement agencies, sociologists, anthropologists, medical biologists, communication and media agencies, economists, agriculturists, pisciculturists, sericulturists, ecologists, environmentalists, pollution biologists, chemists, geologists, geographers, government departments, institutes, foresters, conservationists, geneticists, engineers, animal husbandry and veterinary scientists, entomologists, horticulturists, plant and animal breeders, universities, colleges and many others. Here is the biggest opportunity for exchange of ideas, for recommendation of ideas and blue-prints, for the benefit of people and for transferring technologies from laboratories and pilot-project enclosures to people. Publish or perish, but do not hold the manuscript in your file if it is useful for people. Send it to us, we shall take it to people across the world.
