About Us

Frigmaires incorporated in 1961 as a partnership firm primarily manufacturers of process plants and machinery required by the Chemical, Paint, Inks Pharmaceuticals, Minerals, Food and related Industries.

Over the years as the country was aiming towards self reliance and industrialisation, our firm jointly with our clients took up the challenge in finding solutions and developing cost effective equipment's & process for meeting their stringent requirements. Along with the growth of our clients grew our reputation, experience and knowledge of the manufacturing process and technologies which we wish to pass on to industrialists & entrepreneurs desirous of setting up new industries, expanding or diversifying, their present range of activity.

Today we manufacture a wide range of Mixers, Grinders, Dispersers, Milling, Drying and Seperating equipment. We have been working closely with our clients to tailor machines to their requirements. We offer trial runs on lab machines to get the manufacturing process right the first time.

Our manufacturing facilities are equipped with sufficient machinery and fabrication equipment. Over 90% of our jobs are carried out in house with a team of skilled work force and qualified engineers. Each stage of manufacture is closely inspected for quality and workmanship.
