Manufacturer of potency reclaiming, rubber oils etc.

## About Us

we are one of the leaders in manufacturing reclaiming agent (di-xylene di-sulphide), it is used as a chemical catalyst in the process of making reclaim rubber. Our reclaiming agent (di-xylene di-sulphide) is not like the ordinary reclaiming agent or peptises which are a bi-product of petroleum refining process, instead our reclaiming agent (di-xylene di-sulphide) is a specially made chemical, which is obtained after proper reactions with the sulphur & other solvents. Reclaiming of rubber in india was started in 1960. Reclaiming requires use of heat, in some form, the addition of reclaiming agent and use of softening, plasticizing oils. Reclaimed rubber is a raw material different from starting polymers. Reclaiming agent was being imported from usa, west germany and other country since 1960 by the rubber reclaiming industries. From 1990 we are manufacturing reclaiming agent (supracit 20) in india on commercial basis as per international standard with the help of latest technology.
