## About Us

UROLOGY has undergone a revolutionary change in the last two decades. The belief that minimally invasive surgery benefits patients is now well established. The welcome change is the use of Laparoscopy for procedures which were thought to be impossible without open surgery. Nephrectomy, Pyeloplasty, Orchidopexy etc. are now done laparoscopically. All the advantages of Laparoscopy are made available to our patients and we strive to keep abreast with the latest techniques in achieving our goals.

Holmium Laser Surgery for Prostate (HoLEP) is now established procedure for enlargement of prostate gland. Flexible Ureterorenoscopy with laser stone lithotripsy has opened new avenues for treatments of stones. Our centre is one of the pioneering centers in central India to provide and practice these advanced techniques.
