Life Gene Technology is an organization with strong focus on genomics and molecular biology. It is focused on the use of advanced technology to perform molecular and genetic analysis of human genome.

## About Us

Life Gene Technology is an organization with strong focus on genomics and molecular biology. It is focused on the use of advanced technology to perform molecular and genetic analysis of human genome. Life Gene Technology was established in March 2009 by Dr. Shashikanth, A. The main activities are focused on research for the identification of cancer markers, diabetes. Stem cell research on the uterine endometrial cells is also being carried out. We provide human health molecular diagnostics and contract research services. Dr. Shashikanth has been in the research field from the past 20 years. He has undergone training in animal cell culture and human cytogenetics protocols including tumor cell lines. As part of his Ph. D. work he has been well versed in the techniques of protein isolation and characterization in normal and resistant / deviant tissues for insecticides. He has also established the genetic and biochemical basis of insecticide resistance. He has undergone specialized training in the fields of molecular biology and genetic engineering.
