About Us

Madhur Computers & Institute of Technology was founded in 1996 as a non-profit institution to develop and nurture the professional excellence in Information Technology and to cater the growing demand for IT professionals. Unlike the mushrooming computer training shops, our thrust has been on quality rather than quantity.

Since its inception, MCIT has gained a reputation for itself for its professional training and various courses it has been offering by revising them regularly to the changing needs of IT industries. After completing our courses students become IT professionals, who are well equipped with knowledge and necessary skills and are able to solve the real problems related to Information Technology and since then it is growing day by day. The U.P. Govt. registered it under society act. It industry is changing amazingly fast, we have designed our courses in accordance with the current trends of it industry and have the flexibility to add new courses and leave the courses whichever is now obsolete. After completion of the course, the student will be equipped with the knowledge of latest software packages and be able to face the real life situations.

It is expected by the students that they will devote himself fully for the course and abide by the rules and regulations of the institute. The institute will help the students in the final placement and proper guidance throughout the course.
