## About Us

Thermoformed / Vacuum Formed Plastic components for various industrial applications.

Thermoforming/Vacuum Forming is the process by which Plastics in sheet form is fed into the machine and shaped to the desired component. Thermoforming is used to make items varying from very thin walled disposable trays and containers to thick walled bath tubs and machine parts etc. Material used for Thermoforming/Vacuum forming are Polystyrene, ABS, PET, PP, EPS, Acrylic and Poly Carbonate sheets. The Company has Semi automatic and Automatic machines to make all types and quantities of products commonly used by industries and specializes in developing and supplying customer specific products. Many manufacturing industries use thermoformed plastic components in some form or other, and hence are potential customers. The company has over the years created a large list of customers of repute for the various products.
