## About Us

NFIL introduced refrigerants into India in 1967 by commissioning its manufacturing plant at Surat, Gujarat, Western India. It is backward integrated into the manufacture of critical intermediates namely sulphuric and hydrofluoric acid which are precursors to our Mafron brand of refrigerants.

With over forty years of leadership in fluorine chemistry and refrigerant science, NFIL offers safe, high performance and high quality refrigerants for various refrigeration and air conditioning applications.

NFIL set up an integrated fluorochemicals complex at Surat in 1967. It has one of the largest Anhydrous Hydrofluoric (AHF) and Aqueous Hydrofluoric acid manufacturing capacities in India. AHF is used for captive manufacture of various inorganic fluorides.

NFIL has a long and rich experience in manufacturing various inorganic fluorides with capacity, flexibility and experienced work force. NFIL has the ability to develop products as per customer's need.

NFIL enjoys a respectable market share and excellent relationship with large global consumers of inorganic fluorides. Additional investments are planned to enhance capacities and widen the product range.

Our expertise, built through decades of experience in fluorine chemistry, coupled with state of art manufacturing infrastructure enables us to produce a wide range of value added Specialty fluoro intermediates in large quantities in a safe and responsible manner.
