About Us

RISHI-KRISHI DESHPANDE AGRICULTURE TECHNIQUE is based on vedic literature and cosmic energy. The aim of Rishi-Krishi Technique is to keep the soil alive forever with the help of cosmic energy, as it is the only source of plant growth.

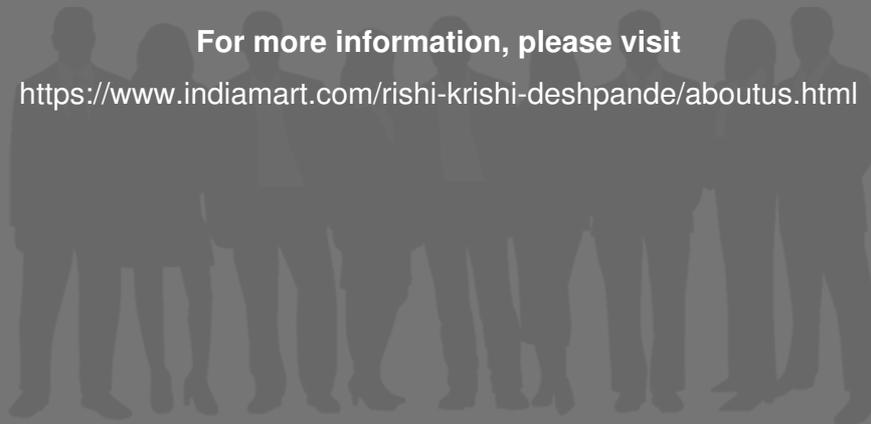

Our Aim :

To teach the farmers to keep the soil alive forever and for that I have to teach them practically.

- 1) Plants have their own language which they use to communicate with the living organism in the soil. The diet of every tree even of the same specie is different from that of other plants.
- 2) No organic or inorganic fertilizer or organic manure is needed as food by plants.
- 3) Cosmic energy is the only source of plant growth.
- 4) The poor drainage is the result of salt accumulation and not cause there of therefore, trenching and washing will never be a lasting solution to improve the saline land.
- 5) Nothing has to be purchased from the market, earthworms, culture, casts etc. You cannot purchase mother's milk in the market.
- 6) Input of the use of cosmic energy in its different forms in its natural way gives result in bumper crops in the same season - no gestation period is required. It is like mother's response to her child.
