About Us

Thirty years ago, when the first Fire Alarm System was installed at the Prime Ministers Secretariat, the "TRIBENI" System was born. Over the years, this experience was mastered accordingly to fulfill the need of multifaceted users. In 1990, we switched over to Electronic Controls, using solid-state circuitry in our Fire Alarm & Detection System. In 2001 we further improved upon our systems to work on the latest series of Micro-controllers. And now in 2001 we have introduced Micro-controller based Analog Addressable Systems.

Since then, SURAKSHA systems have successfully been protecting buildings in different locales all over the country. Designed ruggedly to suit Indian conditions, the company attributes this growth to pursuing policies of product reliability, technical innovation and competitive pricing.

Today, we protect several Multi-storied buildings, Telecommunication Exchanges, Computer Installations, Hospitals, Libraries, Atomic Power Plants, Research Institutions and even the prestigious PARLIAMENT HOUSE of India, from ravages of fire.
