## About Us

This idea is to help students by providing Project Training online which was born during early 2012 when we were looking to make our dream project as part of our engineering curriculum. Project is the one of the most important thing in any student's life. When we go for an interview, an internship, before getting any project in a company or any other career related aspects the first thing they would ask is "Tell me about your project". By knowing all this importance we had planned to make an awesome project that might change our career. But to make such a project is not that easy, its not something that we could build overnight, Well it requires right choice and continuous team effort. Along with the project preparation we are supposed to attend interviews, study for exams. But indeed we wasted a lot of time in finding the Project and Training. Somehow we were able to start our project in an institution which was almost 20km from our places. Really By then we had wasted lot of time by travelling all the way to institution. Because of this we couldn't do our project as we expected and also couldn't prepare for interviews as well. At this moment we decided to build an online portal to avoid these problems faced by us. And let there one place where students can find projects, Submit their dream project for technical help and learn each and every aspect of project just by sitting at home. Hence they can save lot of time, money and energy which can be used for their interview...
