About Us

We provide Water Tank Cleaning Service in 6 stages. Cleaning process has been developed through research and development to arrive at a fool proof process that involves through state-of-the-art imported equipment and proprietary antibacterial agents that are safe, effective and eco-friendly.

Stage 1: Mechanized Dewatering Manhole and surroundings are cleaned off dirt, mud and algae. Excess water is drained out & flushed straight into the drainage system, leaving no mess around.

Stage 2: Sludge Removal Drains the tank of complete sludge & water making it ready to be cleaned with fresh water.

Stage 3: High Pressure Cleaning At this stage the complete tank is thoroughly cleaned right from the ceiling, the walls & the floor, leaving no speck of dirt, algae, mosses, bacteria & calcination.

Stage 4: Vacuum Cleaning a vacuum pump is used to remove sludge & total sedimentation making the tank totally dirt free.

Stage 5: Anti-bacterial Spray The walls & ceilings are made totally sterile from bacteria attack using specially developed antibacterial agents.

Stage 6: UV Radiation. A specially developed UV Radiator is used to kill suspended or floating bacteria remaining in the tank.

We provide Water Tank Service for Residential Apartment buildings Schools, Colleges & Hospitals Residential Care Facilities & Nursing Homes Hotels, Restaurants & Bars, Public & Private Swimming Pools and Gyms Shopping Centers, Sport facilities and Golf Courses...
